

Magnetometer Response Across Trajectory Types

Individual exercise worksheet

Using the companion interactive tool ([activity2_1_magnetometer_trajectories.html](#)), compare the three magnetometer traces and record your interpretation below.

Findings

Which well shows spiral/rugosity-affected response, and what feature of the trace tells you this?

Does Well B's GPIT correction appear to be working? What evidence supports your answer?

What would you do differently on a future run if you saw Well C's pattern in real time?
